

Adjustable Tray Rollers

NEW!

Equipment Corps Adjustable Tray Rollers are designed for easy and efficient electrical cable pulling.

Equipment Corps Adjustable Tray Rollers are designed to hang underneath trays that house electrical cable. The hooks used to hang them contain a speed nut for easy installation and removal with the use of a cordless drill. The widths and heights of our tray rollers are adjustable to fit different sized electrical trays. This means that owning our tray rollers eliminates the need to stock a variety of fixed-sized tray rollers as made by other vendors. Equipment Corps Tray Rollers have laser cut steel frames with few welded parts. This coupled with Polypro rollers makes for a very durable, long-lasting product. Our tray rollers are made in Canada.
